Amazon.com: arabidopsis a laboratory manual: Books Online shopping from a great selection at Books Store. Cold Spring Harbor Laboratory Press - arabidopsis Arabidopsis thaliana has emerged as the model organism of choice for a wide range of basic and applied research into plant biology. This is largely due to the strength of Arabidopsis for genetic approaches, and, with the completion of its genome sequence, for genomic approaches as well.

Arabidopsis: A Laboratory Manual - Detlef Weigel, Jane ... The thale cress Arabidopsis thaliana is increasingly popular among plant scientists: it is small, easy to grow, and makes flowers, and the sequence of its small and simple genome was recently completed. This is the most complete and authoritative laboratory manual to be published on this model organism and the first to deal with genomic and proteomic approaches to its biology. Arabidopsis - Wikipedia Arabidopsis (rockcress) is a genus in the family Brassicaceae. They are small flowering plants related to cabbage and mustard . This genus is of great interest since it contains thale cress (Arabidopsis thaliana), one of the model organisms used for studying plant biology and the first plant to have its entire genome sequenced. TAIR - About Arabidopsis Arabidopsis thaliana is a small flowering plant that is widely used as a model organism in plant biology. Arabidopsis is a member of the mustard (Brassicaceae) family, which includes cultivated species such as cabbage and radish. Arabidopsis thaliana as an Experimental Organism In this context, Arabidopsis thaliana still retains a central role in Plant Science, being the prominent plant model adopted worldwide. Indeed, its main features such as easy and fast growth, high seed production, easy genetic manipulation and a completely sequenced genome still place Arabidopsis as the best model for studying plants.

Arabidopsis: A Laboratory Manual CSHL Press publishes monographs, technical manuals, handbooks, review volumes, conference proceedings, scholarly journals and videotapes. These examine important topics in molecular biology, genetics, development, virology, neurobiology, immunology and cancer biology. Manuscripts for books and for journal publication are invited from scientists world wide.
